### TERRACOTTA

Crushed Terracotta - burned clay- grinded and dried of above 600°C for decorative use as additive for Marmorino, Pastellone and other Stucco Italiano Plasters .

It gives a red-brownish dotted effect to the stucco.

Terracotta comes in two dimensions:

	microns	proper for	Package
Fine	200 to 300 µm	Marmorino Fine	180 grams
Medium	80 to 700 µm	Marmorino Medium, Marmorino Coarse, Pastellone Dilavato	950 grams

This additive has to be added to the plaster in a quantity proper to get the desired effect. The packaging of grams 180 and 950 reflect our taste and the more common quantity for a 20-24 kg bucket of Marmorino, or a 16 kg bucket of Pastellone.

Mix it to the material. It has not to be added in the first coat but in the second and third for Marmorino and Pastellone and in the last one for Dilavato.

.

Note: this additive can slightly change the color and doesn't not affect the final hardness.
